Gay's Downspout Method: Elbow is high enough off the ground for a good slope of downspout extension, about 12"; downspout extension is approximately 36" long made of downspout material only; extension empties onto a concrete splash block only; stones and gravel at end to disperse water without washout; best if not in a mowed area, but, instead mulch or plantings around splash block. Make sure all downspout parts are screwed or riveted together.
